Kia ora,

We are making progress on the development of our eBusiness Gateway alternative and APIs. We hope these new solutions help to improve the ACC service offerings for your customers.

eBusiness Gateway (eBG) alternative

The onboarding process for the eBG alternative is planned for July.

A limited version of the eBG alternative will be made available to 160 providers after the Easter break. This limited version will allow providers to test the features and ensure the solution is fit for purpose.

We are committed to providing the same services as the current eBG; however, users will need to bulk upload their CSV files manually, once migrated to the eBG alternative.

Existing eBG links will be redirected to the new eBG alternative, once all users have been migrated.

We'll continue to share more details with you as soon as they become available.

Inbound documents API (formerly Documents to ACC)

We'll be working with our seed customers in early April and will let you know when our inbound documents API is available on our Developer Resource Centre. This first release of the API will allow your customers to send us seven different document types. It will be extended in future releases to allow for additional document types.

Invoice API

We recently updated our invoice API, to accommodate an increase in the character limit for Purchase Order (PO) numbers. The updated API and release notes are now available on our Developer Resource Centre for you to begin testing.

All ACC providers will be required to use the ACC eight-digit PO numbers with their invoices by early June.

It's important to note that your systems will need to allow **ten-digit** entries if your system uses a fixed-length field for PO numbers.

Claims API

Version three of our claims API will be available in late April on our Developer Resource Centre. This new version of the API will mitigate the risk of your customers running out of claim numbers. A new auto-numbering service will save the time you spend on the current manual process.

Please share this information with any colleagues who may need to know. You can check out our previous updates on the Developer Resource Centre and can expect another update from us in April. If you have any questions in the meantime, please contact us at your convenience.

Nāku noa, nā
